Education

Vellore Institute of Technology (VIT Bhopal)

Aug 2023 – May 2027

◦ B.Tech – Computer Science & Engineering

GPA: 8.85/10.0

Summary

Product-minded CS undergraduate with hands-on experience in product execution, user research, data analytics, and cross-functional collaboration. Demonstrated ability to translate user pain points into structured requirements, prioritise features using data, and work across engineering and operations to ship product improvements. Seeking a Product Intern role to drive measurable user and business impact.

Internship Experience

amasQIS.ai

May 2025 – Oct 2025

Product & Full Stack Intern

- Gathered and documented product requirements by collaborating with engineering and operations teams; translated stakeholder needs into feature specifications that reduced delivery cycle by ~15%.
- Identified user pain points through analysis of 30+ workflow tests (onboarding, messaging, profile management); prioritised 12 critical UI issues and worked with engineering to resolve them, improving retention and satisfaction.
- Defined acceptance criteria and conducted functional testing for 3 core product features; documented structured bug reports that reduced average resolution turnaround by ~30%.
- Proposed and validated a Firebase Authentication improvement based on drop-off data, leading to ~20% reduction in login errors and measurable improvement in Day-1 user activation.
- Participated in Agile/Scrum ceremonies – sprint planning, stand-ups, retrospectives – in a team of 6, developing product execution and stakeholder communication skills.

Projects

Banking Risk Analytics Dashboard

[GitHub](#)

- Defined business KPIs in collaboration with simulated banking stakeholders; translated requirements into an interactive Power BI dashboard analysing 50,000+ customer records across 5 datasets.
- Designed a relational data model with 8 tables and 20+ DAX measures (loan-to-deposit ratio, fee revenue, customer lifetime value) that enabled stakeholders to self-serve insights, replacing manual reporting.
- Identified 3 customer risk segments and lending distribution patterns through data analysis, directly informing product strategy recommendations for the lending division.

UniVibe – Peer Interaction Platform

[GitHub](#)

- Owned end-to-end product lifecycle – user research, requirement definition, feature prioritisation, build, and iterative improvement – for a peer networking platform supporting 100+ concurrent users.
- Mapped core user journeys (onboarding, matching, messaging) and identified friction points through usability testing; implemented preference-based matching that improved engagement and cut session setup from 4 min to under 90 sec.
- Tracked feature performance post-launch; resolved 30+ bugs through structured test case validation, improving application uptime by 25% and reducing user-reported issues week-over-week.

Skills

Product: Requirement Gathering, User Research, Feature Prioritisation, PRD Writing, User Journey Mapping, A/B Testing Fundamentals, Stakeholder Management, Product Roadmapping

Analytics: SQL, Power BI, Python (Pandas, NumPy), DAX, KPI Tracking, Data Modelling, EDA, Business Intelligence

Technical: Firebase, REST APIs, JavaScript, Git, GitHub, Jupyter Notebook

Methodologies: Agile, Scrum,

Cross-functional Collaboration, Problem Solving

Leadership & Extracurricular

National Service Scheme (NSS), VIT Bhopal

Pahadi Club, VIT Bhopal

- Coordinated logistics for 4 community outreach events (200+ beneficiaries); led a 5-member sub-team, strengthening project planning and stakeholder coordination skills.
- Co-organised 3 cultural events (150+ attendees each); owned end-to-end promotion and execution, growing participant engagement by 40% through targeted social media outreach.
